

30° Asymmetrical Beam Antenna

HORN ANTENNA WITH TWISTPORT™ CONNECTOR

30° Asymmetrical Horn TP Antenna has high gain and zero side lobes, meaning very high beam efficiency. Its radiation pattern is wide in the azimuth and narrow in the elevation plane. The stability of gain, radiation pattern, and resulting coverage is excellent across the whole useful bandwidth. These properties and outstanding noise rejection favor 30° Asymmetrical Horn TP Antenna to be used in high customer density and co-location sites. TwistPort™ - our revolutionary patent-pending twist-and-lock waveguide port enables connectivity to a wide range of third-party radios using TwistPort™ Adaptors.

BeamSwitch™ feature enables mounting of the antenna with 90° rotation by swapping the position of the handle and the bracket. AH2030-TP thus can provide 20° azimuth and 30° elevation beamwidth option. The extruded aluminium ring improves the structural strength of the antenna attachment and makes the BeamSwitch™ flip easy and fast.

Asymmetrical Horn antennas were awarded WISPA Product of the Year 2019, 2020 and 2021 Awards.
